Save money and boost productivity with mobile forms from doForms®

do forms®

doForms simplifies and accelerates how you collect info in the field and get it back to the office
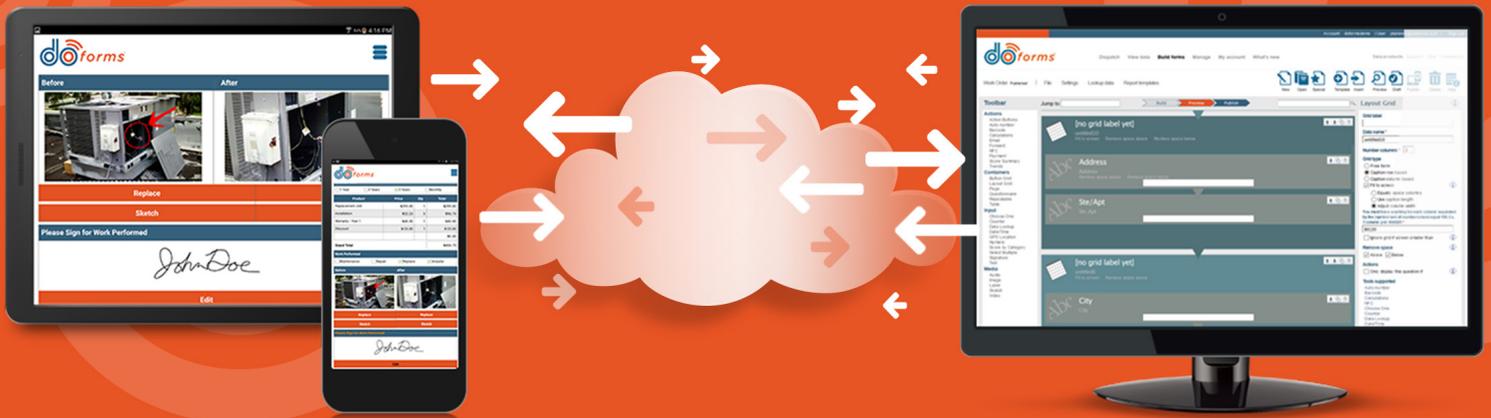

It's a **mobile app** for easily collecting info directly on your smartphone or tablet. Goodbye paper and hassles.

And it's a **web dashboard** for building forms and accessing complete and accurate data back at the office.

"The product is fantastic, but the real engine behind the success is the customer service and support you get. We are now spending 45 minutes less on each site… in addition, we have eliminated data entry for this project."

Rob Mote, Sr. Project Manager, Jones Lang LaSalle Americans, Inc.

The best part? You can do it yourself without IT or expensive infrastructure. And prices start at just $9.95/ month/mobile device ($99.95/year with an annual contract) for unlimited forms and submissions.

The doForms Difference

Think of it: Instead of writing out parts descriptions and numbers, simply select them, quickly and accurately, from a drop-down menu. Take before-and-after photos to document work, and GPS- and time-stamp them. Read barcodes. Document customer sign-off and take no-swipe credit card payment. Have the form auto-calculate job cost estimates, hours worked, and labor expense. And then send all of this data through the safe, secure Cloud to your back office – where it can automatically flow into operating systems like QuickBooks, Sage, Salesforce, MySQL, Sharepoint, and more.

There's nothing that comes close to a doForms form:

- **Drag-and-drop form building** – create a complete custom form in minutes to meet your business needs. Our Mobile Forms Coaches stand ready to help with any questions.

- **In-form calculations** – immediate, automatic price extensions, price totals, sales taxes, work hours, and mileage, as well as self-scoring surveys… intelligence built into the form so your people can leave their calculators at home.

- **Drop-down menus accessing your behind-the-scenes databases** – never again print a price book or issue a paper-based list of parts or employees. Dramatically reduce the time your people spend on form completion.

- **Smart entries with contextual intelligence** – reduce form length and complexity with fields that appear only when triggered by specific values in the preceding entry.

- **Fast, secure credit card payment without a swipe.**

- **Offline use of forms** – upload when connectivity is available.

- **Ability to build live links to URLs and videos** into the form, as well as links to call up other doForms forms.

- **All the other great functions your mobile device makes possible:** GPS and time stamps, voice-to-text, barcode and NFC reading, signature capture… easily built into your doForms form via a simple drag-and-drop operation.

And great forms are just the beginning:

- Add our **Dispatch capability** to send specific forms to individuals and to allow them to send forms to and from each other.

- Use our **Integration capability** to easily bring data into QuickBooks, Oracle, Salesforce, SharePoint, MySQL, Excel, and more.

- Deploy our **Scheduling & Tracking capability** to assign work, know where your workers and trucks are, and seamlessly insert tracking and scheduling data into customer management, revenue management, and timesheet systems.
